Erika Szili

Data & Automation Analyst | Power BI · SQL · Power Platform · AI Enablement
erika.szili@gmail.com · LinkedIn

SUMMARY

Data & Automation Analyst with 4 years in manufacturing, turning Infor ERP and machine data into Power BI reporting and automating the manual steps around it with Power Apps and Power Automate. Delivered 20+ dashboards company-wide, plus shop-floor apps and workflows for production, warehouse, maintenance and customer service. Write SQL and use AI tools (Claude, Microsoft Copilot) daily to review, debug and test code and to detect master data errors, and drive company-wide AI adoption.

CORE SKILLS

- Data & BI: Power BI (DAX, Power Query M, data modelling), Oracle SQL, Excel (pivot tables, SQL-driven reports)
- Automation & apps: Power Automate, Power Apps (canvas), SharePoint lists, Microsoft Planner
- Data sources: Infor ERP (Oracle database), SQL Server, live machine run-hour data, Excel
- AI-assisted development: Claude, Microsoft Copilot (code review, debugging, testing, master data validation, documentation)
- Emerging tools (self-directed pilots): agentic report development with Claude on a Power BI semantic model; scheduled survey-data refresh built with Claude. Piloted with a focus on data protection and reliability; not in production.
- Languages: English (full professional), Hungarian (native), French (elementary)

EXPERIENCE

Melior Laser Kft., Biatorbágy | sheet metal fabricated part supplier for industrial customers

Data & Automation Analyst Feb 2026 – Present

- Built a Power Apps recommender for the production manager that ranks all five bending machines and operators by actual production time for any part number, so planners reuse proven machine programs and allocate work on real shop-floor data. Runs on Infor ERP operator reports exposed through a custom Oracle view; in pilot alongside production until Nov 2026.
- Replaced a manual, form-based packing process with a mobile Power Apps and Power Automate solution: warehouse staff record box and pallet shipments (dimensions, weights, photos) in SharePoint lists, customer service and the warehouse get an automatic HTML email, and the same data produces the packaging-material log for the company's EPR transport-packaging obligation. Built on standard Microsoft 365 licensing at no extra cost.
- Automated usage-based preventive maintenance with two Power Automate flows: a weekly run reads live machine run-hours from SQL Server, checks them against the SharePoint maintenance plan and creates Planner tasks, with the manual chapter attached, only where service is due; closing a task writes the actual hours back and resets the cycle. Maintenance now follows real machine usage instead of a fixed calendar (pilot since Apr 2026, go-live Jan 2027).
- Built a daily Excel efficiency tool on SQL-extracted ERP operator reports, comparing planned standard times with actual production times. It flagged major deviations for standard-time review and exposed inconsistent operator entries, improving reporting accuracy (Jan–Mar 2026).
- Write SQL and use Claude and Microsoft Copilot daily to review, debug and test it, screen master data for errors and speed up documentation; lead company-wide AI adoption through internal training and change support.

Data Analyst (Power BI) Oct 2022 – Jan 2026

- Implemented a company-wide Power BI reporting system of 20+ dashboards (energy, on-time delivery, quality, accounts receivable aging) for management, finance and operations, cutting manual reporting time and speeding up decisions.
- Introduced a production variance monitoring framework that benchmarks planned standard times against actual times by product and employee, reducing manual analysis and surfacing process inefficiencies faster.
- Cut inventory monitoring time by about 50% with an automated Power BI and Power Automate stock alert solution.
- Built automated Excel reports from Infor ERP data using SQL, giving departments including the sales team, quality, procurement and manufacturing accurate, up-to-date figures for daily and strategic decisions.

CERTIFICATIONS

- Microsoft Certified: Power Platform Fundamentals (PL-900), Sep 2026
- Microsoft Certified: Power BI Data Analyst Associate (PL-300), earned Nov 2023
- Power Automate Complete Course, Udemy, 2025
- Advanced DAX, Maven Analytics, Nov 2024
- Data Analysis with Python (pandas), Maven Analytics, Jan 2026
- ChatGPT for Data Analytics (2024) and How LLMs Work (2025), Maven Analytics
- Google Data Analytics Specialization, Coursera, Nov 2022

EDUCATION

- **Edutus University**, Budapest | Postgraduate degree, Online Marketing
- **Budapest University of Economics and Business** | BA, Commerce and Marketing (Marketing Communications)
